1. Introduction

What is Cruzeiro?

Cruzeiro is a personal finance management app for Windows. Your data stays 100% on your computer — never sent to the cloud, unless you choose to save to a synchronized folder (e.g. Dropbox, OneDrive).

With Cruzeiro you can:

- Record and categorize all your financial transactions
- Automatically import bank and broker statements
- Track your net worth: real estate, investments, and bank accounts
- ★ **v4.0:** Calculate IRR and real cash flow for fixed assets
- ★ **v4.0:** Generate financing schedules (SAC, PRICE, SAM, Off-plan)
- ★ **v4.0:** View net worth charts and TWR benchmark vs CDI/IBOVESPA
- Set category budgets and financial goals
- Search and filter any transaction with advanced filters

Installation

Run **Cruzeiro-Setup-4.0.0.exe** and follow the instructions. The app will be installed in Program Files with a desktop shortcut.

Updates: Cruzeiro checks for updates automatically on startup. New versions download in the background and install when you close the app.

First run

On first launch, a guided tour introduces all features — including v4.0 highlights. You can skip it and restart anytime in Settings.

The language is auto-detected from your system. To change it, go to Settings and choose between Portugues, English, or Espanol.

2. Accounts and Transactions

Creating an account

Click "+ Account" at the bottom of the sidebar. Choose the type, enter a name, and set the opening balance.

Account types:

- Checking: main bank account
- Savings: savings account
- Credit card: card statement
- Investment: brokerage account
- Cash: physical money
- Other: any other type

Recording a transaction

Click any account, then click "+ New transaction" (or Ctrl+N). Fill in account, date, memo, category, and the amount (expense OR income).

For transfers, select the category "■ Transfer: [Destination account]" — the app automatically creates the linked debit and credit.

★ v4.0 Link to fixed asset

When creating or editing a transaction, check "Link to fixed asset". Select the asset and the movement type:

- Rent received
- Dividend
- Interest on Net Equity (JCP)
- Capital contribution / Capital reduction
- Asset expense
- Financing installment — automatically reduces the outstanding balance
- Purchase / Sale

The transaction is automatically recorded in the asset's cash flow. Deleting the bank transaction automatically reverses the effect on the asset.

Inline editing

Double-click any field to edit directly in the table. Navigate with Tab (next) and Shift+Tab (previous). Enter confirms, Esc cancels.

Multiple selection

- Single click: selects row (anchor)
- Shift+click: extends selection from anchor to row
- Ctrl+click: adds/removes row from selection
- Delete: deletes all selected (with confirmation)

Context menu (right-click)

- Duplicate transaction / Duplicate with today's date
- Mark as cleared / uncleared
- Create recurring
- Delete

Reconciliation

The "✓" column shows cleared status. Click to toggle. Marking a transfer marks both legs automatically.

3. Import

Bank statements

Click "Bank statement" in the Import tab and choose your bank. Select the XLSX/XLS file exported by your bank. Supported: Itau, BTG Pactual, XP Investimentos, and others via manual configuration.

■ Don't see your bank? Use "+ Other bank/statement..." to manually configure the file format.

The app automatically detects duplicates (within ± 7 days with same amount) and shows a review screen before importing.

Card statements

Click "Card statement" and choose the bank. Amounts in parentheses — e.g. (R\$ 150.00) — are automatically interpreted as negative (credits).

Broker statements

Click "Broker statement". Supported: BTG Pactual (one XLSX file) and XP Investimentos (two files: Position and Statement). For XP, select either file first.

Machine Learning (ML)

Cruzeiro learns from your choices. On the post-import review screen, the app automatically suggests both the category and the memo based on previous history.

★ v4.0 Link during import

On the import confirmation screen, two extra columns appear: **Fixed asset** and **Movement type**. Select the asset and type for each transaction you wish to link. The ML can suggest both based on the memo.

4. Net Worth — Fixed Assets

Registering an asset

Click "+ New" in the Fixed Assets section. Enter the name, asset type (Property, Vehicle, Boat, Club, Corporate, Other), appreciation trend, and initial value.

The app projects the value in subsequent months using the selected index (IPCA, IGP-M, INCC, TR or fixed).

★ v4.0 Cash flow and IRR

In the asset modal, the **Monthly History — Movements** section lets you record cash inflows and outflows directly for the asset.

The net worth table automatically displays:

- **Nominal cash flow:** movements in current values
- **Real cash flow (IPCA):** movements adjusted for inflation to today
- **Nominal IRR:** internal rate of return without inflation adjustment
- **Real IRR:** IRR adjusted by IPCA (return above inflation)
- **Gain/Loss:** absolute result in BRL (cash flow sum + current value)

★ v4.0 Financing — SAC, PRICE, SAM and Off-plan

Check "This asset is financed" to open the contract form. Fill in the contract data and click **"Generate schedule"** to preview installments.

System	Characteristic	Typical use
SAC	Decreasing installment, constant amortization	Real estate financing
PRICE	Fixed installment (French system)	Vehicles, some real estate
SAM	SAC/PRICE average	Caixa Economica Federal
Off-plan	No interest, only monetary correction	Properties under construction

■ Future installments are a **projection in constant values** (no future monetary correction), for reference only. The outstanding balance only decreases when you record a paid installment in the bank account as "Financing installment".

★ v4.0 Correction indexes

- **IPCA** — Brazil official inflation (BCB series 433)
- **TR** — Reference Rate (BCB series 4347)
- **IGP-M** — General Market Price Index (BCB series 189)
- **INCC** — National Construction Cost Index (BCB series 192)

Indexes are updated automatically when the app opens.

5. Net Worth — Financial Investments

★ v4.0 IRR and Gain/Loss per asset

- **Nominal IRR:** internal rate of return based on all cash flows
- **Real IRR:** IRR adjusted by IPCA (return above inflation)
- **Gain/Loss:** (withdrawals received + current value) – contributions
- **Nominal return:** annualized % return of the nominal cash flow

★ v4.0 CDI and IBOVESPA benchmark

Configure the benchmark of each asset (CDI, IBOVESPA or None) in the edit modal. The table shows the difference in % p.a. between the asset's nominal IRR and the accumulated benchmark over the same period. CDI and IBOVESPA are updated automatically.

★ v4.0 Evolution charts and TWR

- **Total Net Worth:** evolution in BRL (fixed assets + accounts + investments)
- **Fixed assets:** appreciation of physical assets over time
- **Investments vs CDI vs IBOVESPA:** time-weighted return (TWR)
- **Individual asset:** compare each investment with its configured benchmark

TWR (Time-Weighted Return): eliminates the effect of contributions and withdrawals, showing the pure management return.

6. Evolution

The Evolution tab shows how your income and expenses have changed over time. Use the toggles to switch between **Summary** (income/expense/profit) or **By category**, and between **Table** or **Charts**.

7. Advanced Search

Press **Ctrl+F** to open. Filters: Text, Account, Type, Status, Period, Category. Click column headers to sort. Click any result to navigate to the transaction.

8. Budget

Click "+ New budget" to set a monthly limit per category. Progress bars: ■ within budget → ■ near limit → ■ over limit.

9. Financial Goals

Target amount — "I want to save \$X": links to an account, calculates when you'll reach the goal.

Monthly savings — compared against the real average of the last 12 months.

Emergency fund — calculates the target based on your real expenses.

10. Recurring Transactions

Click "+ New recurring" (or right-click a transaction). Frequencies: daily, weekly, biweekly, monthly, annual. Can be paused or deleted anytime.

11. Settings

Language

Go to Settings and choose Portugues (PT), English (EN), or Espanol (ES).

Password

Click "Set password" in Settings. Also enter an email address — if you forget the password, click "Forgot password" on the login screen for a temporary code.

■ If you don't have access to the email, delete the "passwordHash" line from `_settings.json` in the data folder.

Data directory

Default: AppData\Roaming\Cruzeiro. To sync across computers, click "Change folder" and choose a Dropbox, OneDrive, or Google Drive folder.

■ Never open the app on two computers simultaneously with the same synced folder.

Backup and restore

Cruzeiro backs up automatically every time the app opens. To restore, click "Restore backup" and select the desired .db file.

12. Keyboard Shortcuts

Global shortcuts

Ctrl+F — Open advanced search

Ctrl+N — New transaction

Ctrl+T — Transfer between accounts

Ctrl+Z — Undo last action

Esc — Close modal / cancel

Enter — Confirm dialog

In the transaction table

Double-click — Edit field inline

Tab / Shift+Tab — Navigate fields

Enter — Confirm edit

Esc — Cancel edit

Delete — Delete selected

Shift+click — Select range

Ctrl+click — Add/remove from selection

Right-click — Action menu
